

1943 · HOTEL NEW YORKER · ROOM 3327

He wanted to give the world free energy.

They cut his funding. He died broke, in a hotel room. The night he died, his papers were taken.

A hundred years later, money still moves the way it did when he was alive.

⚡ **ZAPP** · Radam DiBabel and five partners · Barcelona · September 2026

THE RAIL · THIS WORKS TODAY

Anywhere on Earth. One second. Less than a cent.

IS

to settle, anywhere on Earth
a card payment takes three days

\$0.006

to send ⚡ZAPP
a card costs a shop 3%

6.36%

what a family still loses
sending money home today

A family in Barcelona sending money home to Colombia loses a week of food in fees, for a message that travels at the speed of light. With a card, ⚡ZAPP lands as euros or dollars **while they are still standing there.**

Not a plan. A rail.

It runs today on Solana, which on a busy day moves more transactions per second than Visa averages. Cash in and cash out go through licensed partners, never through us.

Nine products, every price on 3, 6 or 9, opening this month at **zapp369.com**. Every number on this slide is checkable from your phone before I finish talking.

Every euro of profit splits four ways.

40%

grows the treasury

A savings account anyone can watch on chain. Mostly Solana, with a stable buffer. Built on a ledger.

30%

buys ⚡ZAPP back and burns it

Fewer coins every month, forever. Bought on the open market from a public wallet.

20%

to the people who build it

Earned by giving, never by holding. No salary, no yield, no promise.

10%

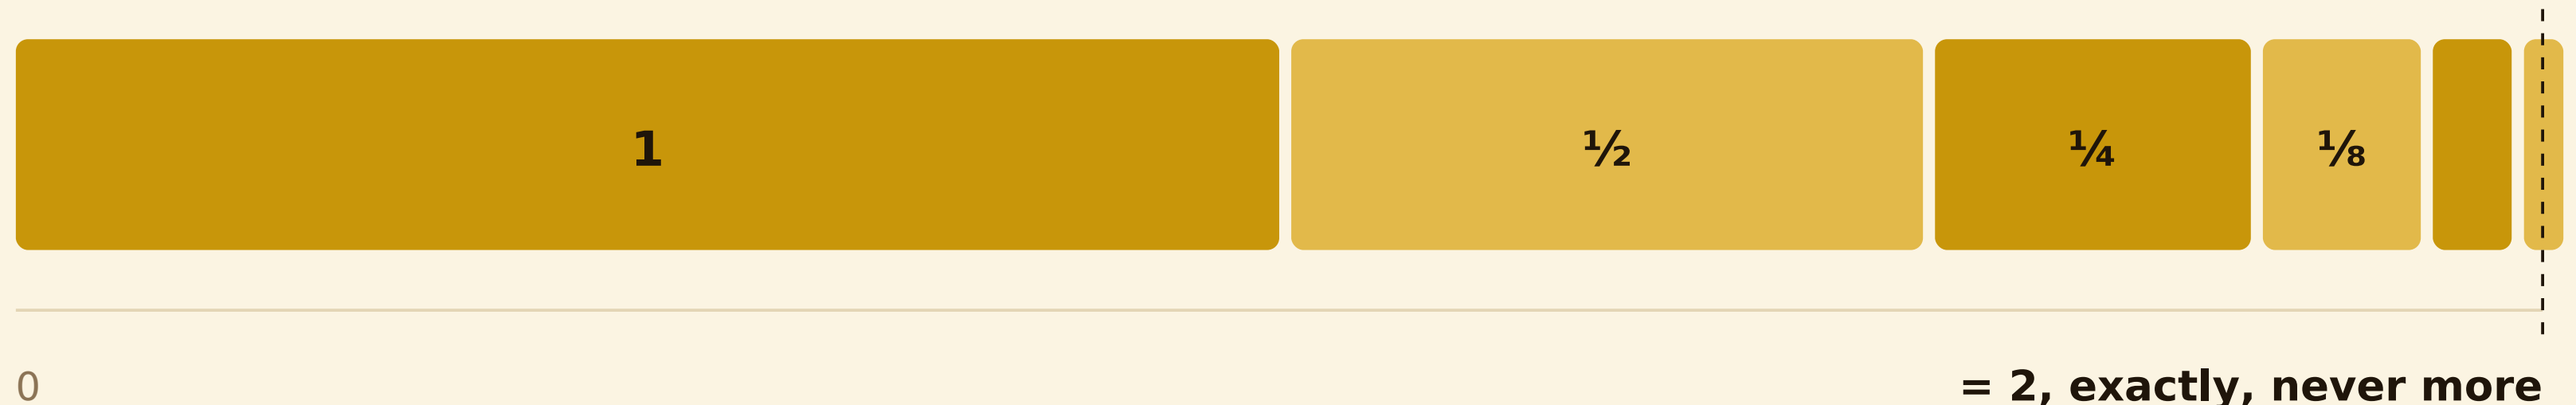

to families who need it

Every transfer published. Help you can prove, not just promise.

The treasury earns on itself. It pays for the next thing. We never ask the community for money again.

The Maths. Why it settles at two and never explodes.

$$1 + \frac{1}{2} + \frac{1}{4} + \frac{1}{8} + \dots = 2$$

Add a half, then a quarter, then an eighth, forever, and it never explodes. It settles, on exactly two. Recycle a share of the value each cycle and the long run effect is **$1 \div (1 - \text{recycled share})$** . Recycle half, and it is exactly two. The engine roughly doubles real value, then holds.

The quiet truth

The series settles only because the recycled share is less than one. The part that is not recycled, the share that pays the workers and helps families, is exactly what keeps it from blowing up. Pay the people and the maths stays beautiful. Promise the moon and it never settles.

The Double Burn. Fewer coins, deeper market.

Each cycle the buyback buys $\propto$ ZAPP on the open market. Then each coin goes down one of two drains, and the community chooses the mix.

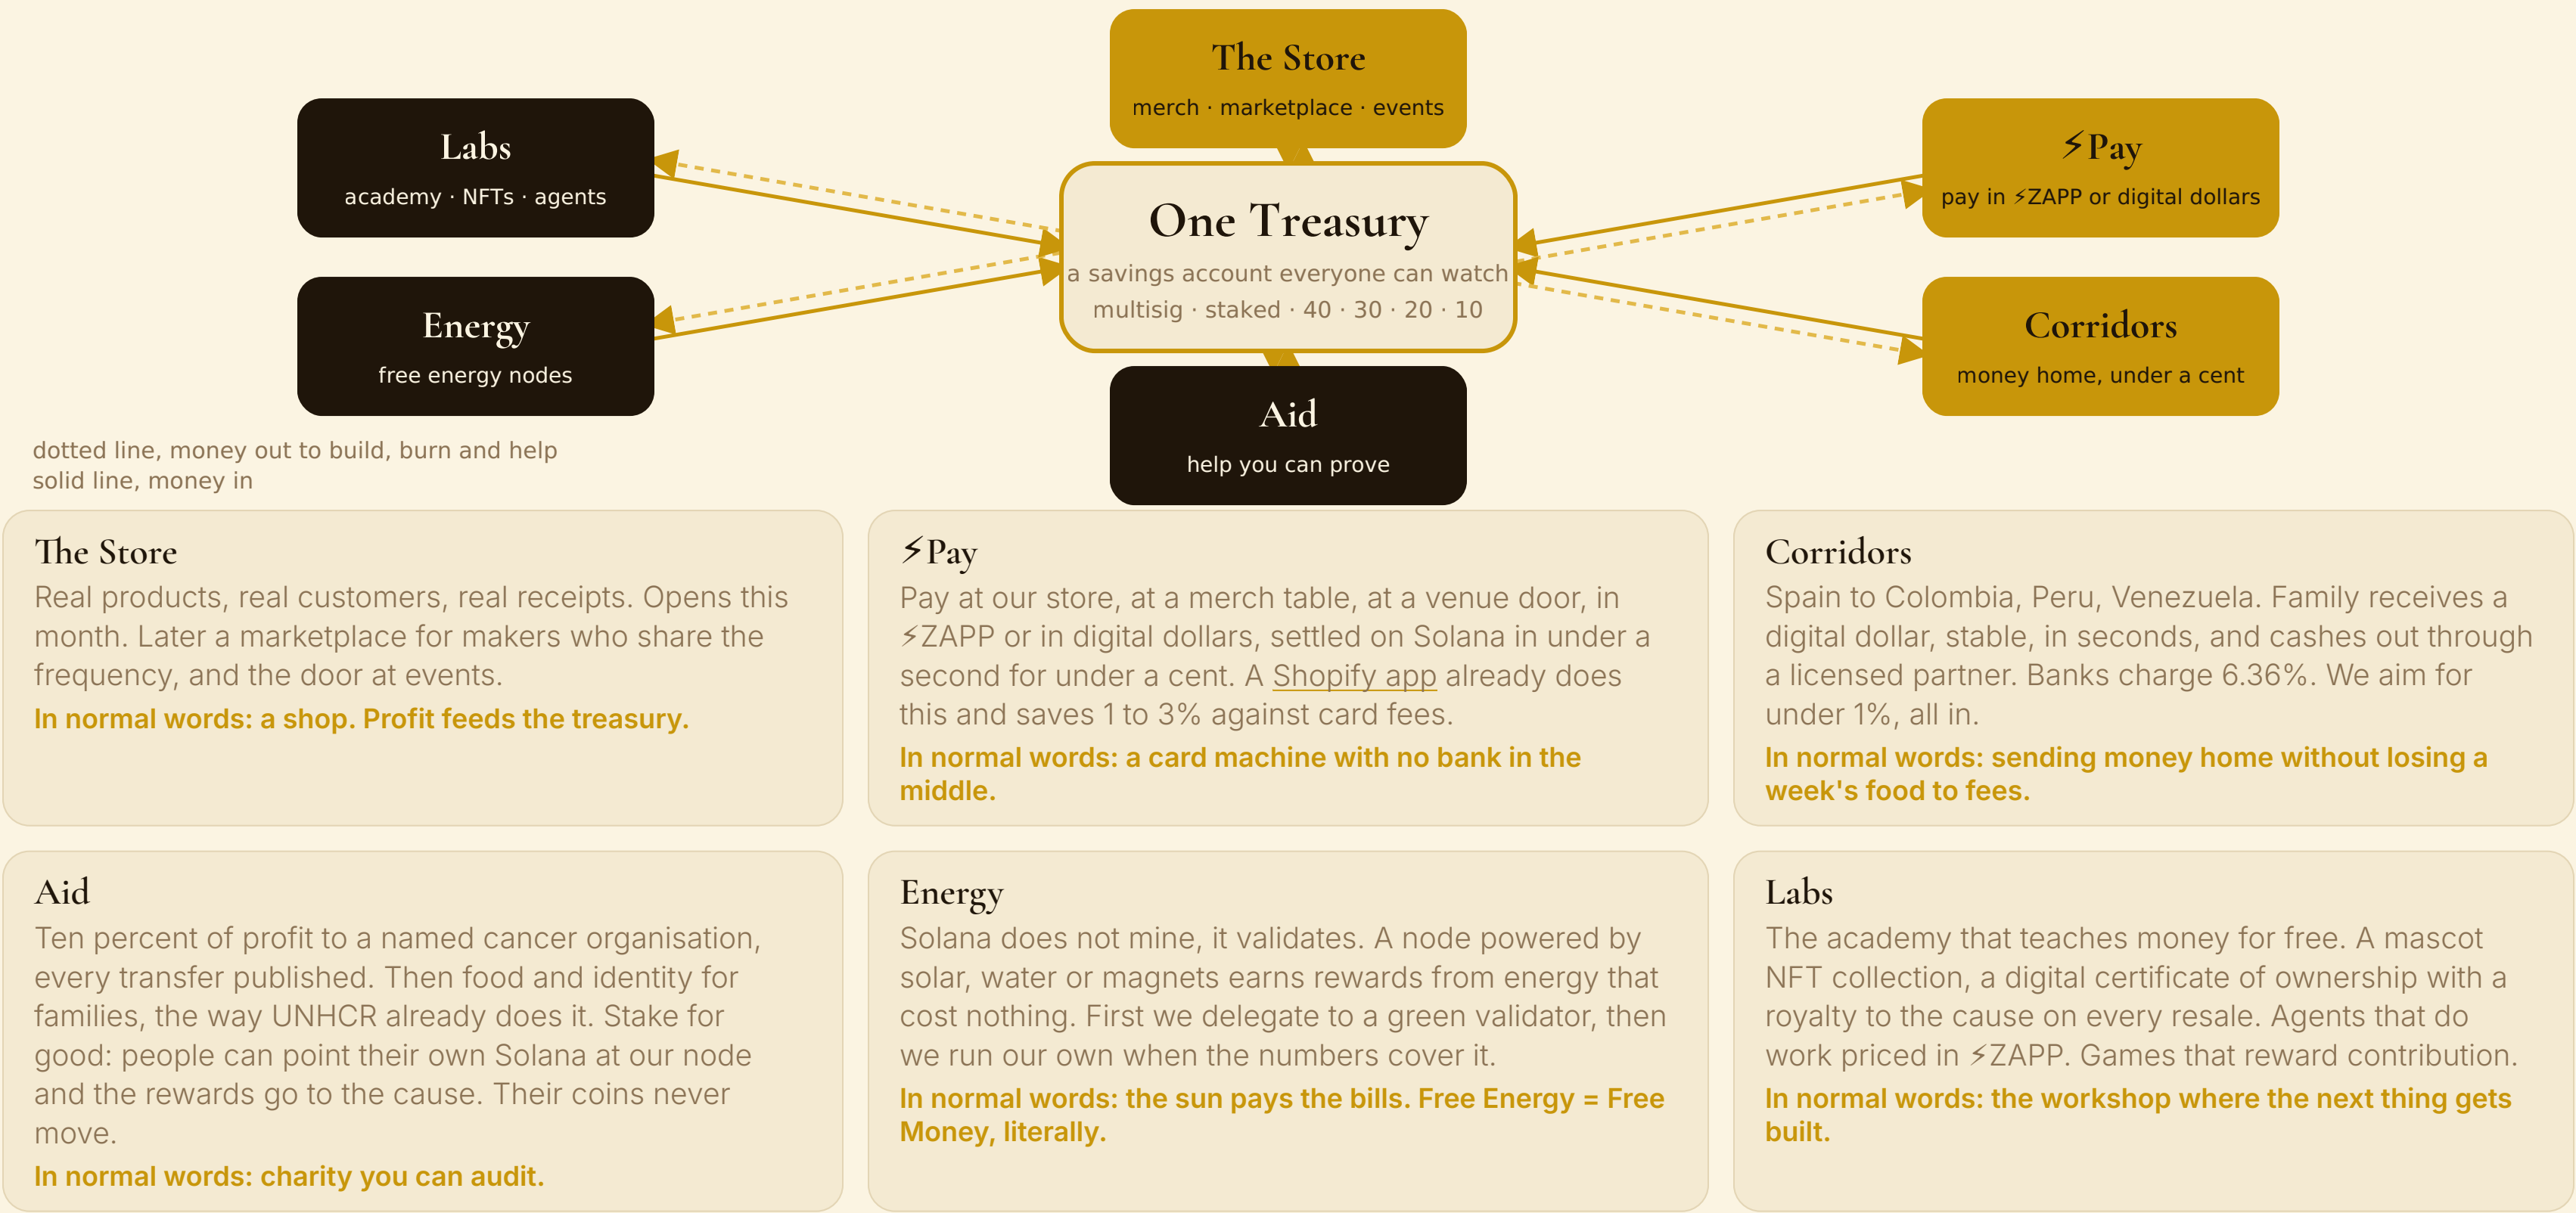

Why two and not one

The burn lifts the floor. The locked liquidity makes the market strong so the price can hold near that floor. Backed and stable at once.

Never pulled

What goes into liquidity stays there. What goes to the burn address is gone forever. Both are public wallets anyone can watch, every cycle, on chain.

The Ecosystem. Six divisions, one treasury, one mission.

THE REASON · ALREADY PROVEN BY THE BIGGEST AGENCIES ON EARTH

The Mission. Real help, already proven.

\$5B

cash assistance UNHCR delivered to 35 million people in 100 countries. In Ukraine it moved as digital dollars on a blockchain, cashed out at MoneyGram.

\$200M

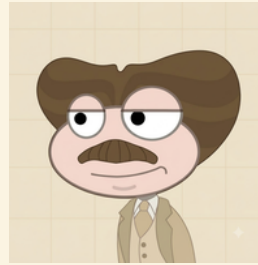

raised for Ukraine through crypto and NFTs. Refugees in Jordan's Azraq camp paid for food by iris scan, every purchase on the ledger.

\$200K

GiveCrypto put straight into Venezuelan hands through local leaders, to beat hyperinflation. Our first corridor starts where that stopped.

Tesla wanted to give the world free energy. The founder's 2023 thesis found the agencies already using this technology to feed and identify people. ↗ZAPP does the same, from Barcelona, on Solana, in the open: **help you can prove, not just promise.**

Built legal, everywhere. 0% tax. Liquidity burned. No yield to holders, ever. Marketing under MiCA Article 7. Cash in and out only through licensed partners. A lawyer confirms the structure in writing before anything moves.

THE IDEA · FOUR MONTHS OLD · A MILLION PEOPLE BEHIND IT

Free Energy = Free Money ∞

Tesla died broke because nobody stood behind the idea. This time the idea has a million people behind it.

A store today

Nine products, real money, opening this month.

A rail underneath

One second, six tenths of a cent, anywhere on Earth.

Corridors home

A family keeps the week of food it used to lose.

Help you can audit

Ten percent of every profit, every transfer published.
